

The Interdyne family of Industry Solutions

AUTHORISED 3RD PARTY DEVELOPER

PASTEL ACCOUNTING

The Interdyne family of Industry Solutions have been developed in conjunction with companies that operate in each Industry. Each Interdyne Solution embodies the following principles:

- The software is specifically designed to reduce your fixed administrative costs thereby immediately improving your company's profitability.
- Very efficient operation allowing you to retain much of your old hardware thereby reducing your initial overall investment.
- The software 'works like you do' as it has been developed in partnership with each industry.
- The software is designed in such a manner that customisation can be done to accommodate unique

processes within your business that are not available as standard within the package.

- Special attention has been paid to the design of the system to ensure that the system can be operated simply and easily.
- Processes are designed to operate in real-time, with a high degree of flexibility – allowing you to give your customer the best and most accommodating service possible.
- Aggressive use of the latest technologies and an ongoing research & development program always ensure that you stay ahead of the competition.
- Interfacing to Pastel Partner Financials is provided.

The best compliment any company can receive is to be told that it is easy to do business with them. Interdyne customers get things done quicker and can ensure that they are easy to do business with. 'One size fits all' computer systems are often complex to use because of unnecessary clutter in the software. This can affect your ability to be flexible to customer needs and make it difficult for them to do business with you. By focussing on your industry, Interdyne has been able to remove unnecessary processes and thereby significantly reduce the administration work required to operate your company.

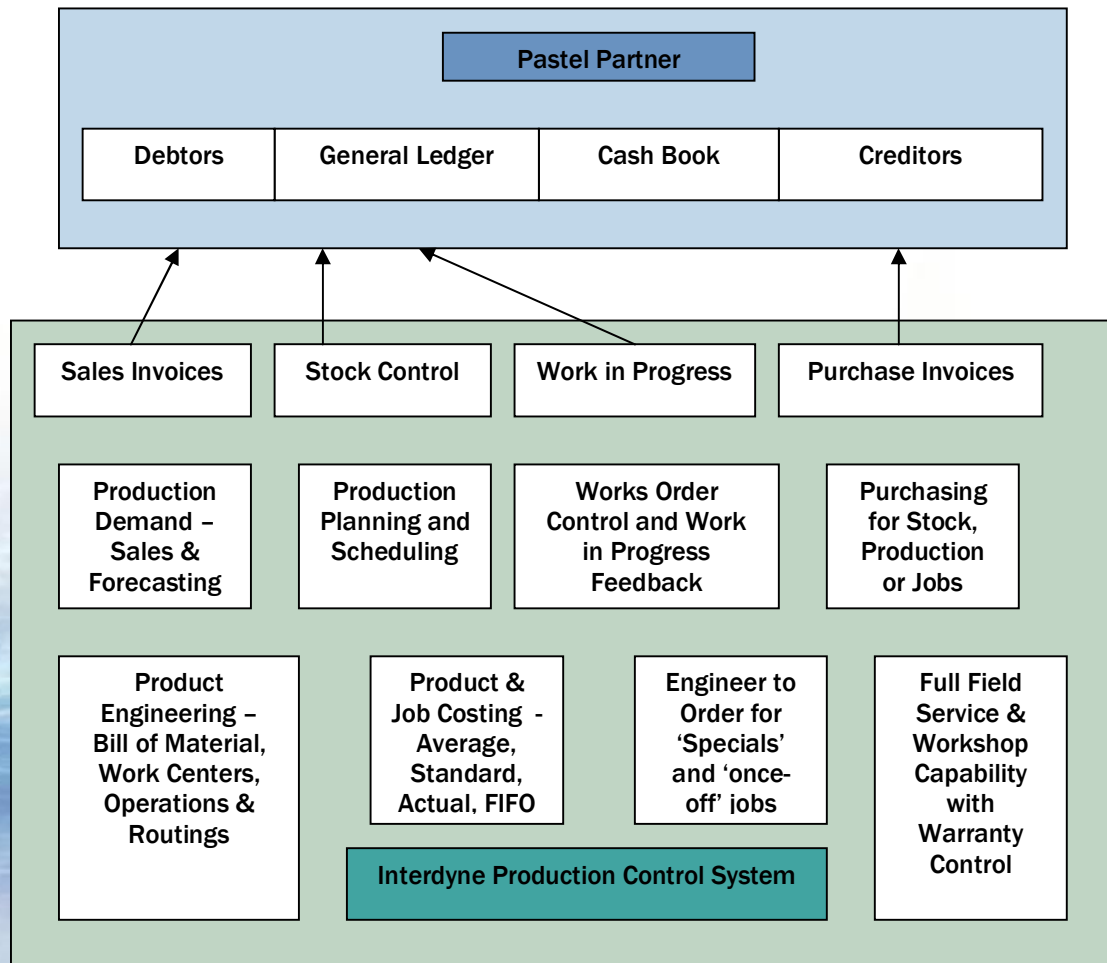

The solutions supported by the Interdyne product include:

- Distribution
- Production
- Engineering and Make to Order Production
- Project Manufacturing and Control
- Repair and Refurbishment, Field Service and Warranty Control

Companies who operate in more than one of the above areas are easily catered for as all of the solutions can work together.

Adding the Interdyne Solution to Pastel Partner will give you all the functionality and control of an Enterprise Resource Planning system that is specifically designed for ease of implementation and ease of use.

**Pastel Partner integrated to Interdyne Production Control
delivers a highly functional ERP (Enterprise Resource
Planning) system**
